

Benfield has joined the Bender family as a distributor in the New York City Metropolitan area

Bender and Benfield Control Systems are pleased to announce our partnership to offer Ground Fault Detection and Location solutions which couple system uptime with electrical safety. Please let us show you how to safely stay operational during a ground fault condition and how to quickly locate electrical ground faults in your facility.

- ▶ **Ground-fault relays for solidly- and resistance-grounded systems**
Bender's RCM series relays monitor for AC/DC leakage current. Available in single-channel and multi-channel options.
- ▶ **High-resistance grounded (HRG) systems**
Neutral grounding resistor (NGR) monitoring via the state-of-the-art NGRM700, as well as a wide range of grounding panels and solutions.
- ▶ **Ground-fault detectors for ungrounded systems**
Bender's advanced ground-fault detection and location solutions for AC/DC systems detects ground faults before leakage current may even be present. The iso685 series includes advanced communication capabilities.
- ▶ **Industrial GFCIs and protection panels**
Bender's advanced ground-fault circuit interrupters (GFCI) and protection panels are a complete 1ph or 3ph solution for protecting personnel and equipment.
- ▶ **Protective relays**
Monitor a multitude of key system values, including voltage, current, phase sequence, ground continuity, and more.
